

Test Report — Notes upload: .txt and .docx besides .mht

PR: kuantorflow#154 (+ kuantorflow_automation#24) · Issue: kuantorflow#137 · Date: 2026-07-27

Summary

The **Upload notes** panel now accepts .txt and .docx as well as .mht, and all three formats share one Reverso copy-paste parser. Verified against the real sample notes in Documents/!Projects/KF_Examples — a plain-text Reverso copy-paste, a simple word - translation list, and a 80-paragraph OneNote → Word export mixing both styles — plus 22 new offline tests. Suite: **131 passed**, was 115.

What changed

- ``parsers.py``
- The Reverso state machine was lifted out of the BeautifulSoup walk into `_reverso_entries_from_lines()`, which consumes format-agnostic *classified lines* (text / header / sense / field / terms). Three classifiers feed it: `_reverso_lines_from_soup` (.mht, colours), `_reverso_lines_from_docx` (.docx, the same colours — Word keeps them in the runs' properties) and `_reverso_lines_from_text` (.txt, classified by layout since text carries no formatting at all).
- `_cards_from_lines()` runs the Reverso machine and then offers every line it did **not** claim to the plain word — explanation parser, so one file may mix Reverso blocks and simple lines (the sample .docx does). Cards come back in document order, de-duplicated by word.
- `_docx_paragraphs()` reads word/document.xml with zipfile + ElementTree — **no new runtime dependency** (python-docx was the alternative; the issue preferred the lighter route).
- `parse_txt_preview` / `parse_docx_preview`, and `parse_notes_preview(filename, ...)` which dispatches on the extension and raises ValueError for anything else.
- Two fixes that fall out of the shared machine and also improve .mht: a single-sense entry (Reverso omits the 1. marker) is no longer dropped, and a header with no part of speech leaves pos unset instead of labelling the card other.
- `_entry_from_line()`: a **Cyrillic right-hand side is a translation** (pursuit - преследование → translation_rus), not an English explanation.
- ``app.py`` — `upload_mht/mht_file` → `upload_notes/notes_file`, dispatch via `parse_notes_preview`, template variable `mht_content` → `source_content`.
- ``templates/index.html``, ``style.css`` — heading “Upload notes (.txt, .docx, .mht)”, `accept=".txt, .docx, .mht, .mhtml"`, CSS modifier `--mht` → `--source`.
- **README / CLAUDE.md** — the three formats and the shared-parser architecture.

Automated tests

- **Added:** tests/test_notes_formats.py — 22 tests covering the plain-text Reverso copy-paste (senses aggregated, examples, terms listed one per line so no AI split is needed), simple lines with Cyrillic vs English right-hand sides, cp1251 decoding, a canned .docx built in-test with zipfile (mixed Reverso block + plain line, single-sense entry without a 1. marker, the 1. marker being coloured like an example but holding no content), extension dispatch, the unsupported-format error, and the upload route for .txt/.docx plus the panel's heading and accept strings.
- **Updated:** tests/test_lookup_and_cards.py — the existing .mht upload test now posts the renamed upload_notes/notes_file.
- **Suite result:** pytest -m "not live" — **131 passed**, 1 skipped, 6 deselected (was 115 passed).

Manual & browser verification

Flask dev server against local MySQL, with a real ANTHROPIC_API_KEY so the glued-translation split ran for real (not stubbed).

Check	Outcome
LucidDream.txt (Reverso copy-paste, no POS in the source)	1 card, both senses aggregated into the explanation, 2 English examples, translation_rus = вещей сон, осознанный сон, ясный сон, 2 Russian example translations
Pursuit_Haunting.txt (simple lines)	2 cards, each with the Cyrillic side stored as translation_rus, no bogus explanation_en
Fri Jul 24 B Extremes.docx (80 paragraphs, mixed)	7 cards in document order: 2 from plain lines (ex 'acerbate → translation, exorbitant → explanation) and 5 Reverso cards, incl. dazzling as two cards (adjective + noun)
Glued Ukrainian terms, live AI split	авторитет: влада, адміністрація, повноваження, авторитет, експерт, фахівець, дозвіл, схвалення, авторизація; fount: джерело, фонтан
OneNote noise (From <https://reverso.net/...>, date/time header)	ignored — no stray cards
Browser upload of a mixed .txt (real file input + Upload & save)	two-column review popup (940px), source pane beside 1 card, Add All and the #146 close cross present
Panel copy in the served page	heading "Upload notes (.txt, .docx, .mht)", accept=".txt, .docx, .mht, .mhtml", field notes_file
Unsupported extension (notes.pdf)	"Unsupported notes format: .pdf" banner, no popup
Database writes during all of the above	none — uploads only ever propose cards (verified: no rows created)

Result

Pass. No new runtime dependency, so deploying is a git pull + web-app reload. Two limits worth knowing, both documented in the parser: a plain-text Reverso block must be contiguous (a

blank line ends it, which is what keeps ordinary notes around it out of the parser), and plain text carries no part of speech, so those cards are saved without one.
